

Bihar Home Construction Dashboard

Complete Specification for Dashboard Replication

01 Jun 2026 | Give this + Excel to new Claude project

Bihar Home Construction Dashboard — Complete Specification

How to Use This Document

Give this file + the Excel file (`Project\_Home\_01062026.xlsx`) to a new Claude project. Ask it to:

- Read the Excel file to extract current data
- Build a React (.jsx) dashboard artifact following this spec exactly

1. PROJECT OVERVIEW

Project: Home construction in Bihar, India. Family-built house.

Started: 7 May 2026

Current Phase: Plinth (Foundation completed)

Construction Model: Engineer (Econ Builder) brings labour; family provides all materials.

Three Payers: Avinash (Self), Papa, Chota Bhai

Key Facts

- All amounts in Indian Rupees (₹)
- Format: ₹X.XXL for lakhs (₹1,00,000 = ₹1L), ₹XK for thousands
- Date format: DD-MMM (e.g., "01-Jun", "25-May")
- Brick deliveries come from prepaid advance (track delivery against advance, not as new payment)
- Mukesh Yadav is the JCB + Mitti vendor — earth filling LABOUR is separate vendor "Daily Labour"

2. EXCEL FILE STRUCTURE

The Excel file `Project\_Home\_DDMMYYYY.xlsx` has 10 sheets. Read data from these sheets to populate the dashboard.

Sheet: "All Transactions" (PRIMARY DATA SOURCE)

- Row 4:** Headers
- Row 5 onwards:** Data
- Columns:**
 - A: Sr (serial number)
 - B: Date
 - C: Month (text like "May-2026", "Jun-2026")
 - D: Phase (Foundation / Plinth / Superstructure)
 - E: Category (Building Materials, Steel/Iron, Professional Fees, Land Development, Labour, Transport, Miscellaneous, Food/Provisions)
 - F: Subcategory (Bricks, Tiscon 12mm, Cement-Ultratech Super, etc.)
 - G: Item description (detailed text)
 - H: Vendor name

- I: Quantity
- J: Unit (Pcs, Bags, Ton, CFT, Nos, Hrs, Lumpsum, L, Kg)
- K: Rate per unit
- L: Gross Amount (Qty × Rate)
- M: Discount % (decimal: 0.04 = 4%, blank = no discount)
- N: Discount Amount (FORMULA)
- O: Net Amount (FORMULA: Gross - Discount)
- P: Paid By ("Self-GPay", "Self-Bank Transfer", "Papa", "Chota Bhai")
- Q: Payment Mode

Sheet: "Payment Tracker"

- **Row 4:** Headers
- **Row 5 onwards:** Data
- **Columns:**
- B: Date
- C: Paid By
- D: Paid To (vendor name)
- E: Category
- F: Description
- G: Amount
- H: Payment Mode
- L: Running Total (FORMULA)
- M: Notes

Sheet: "Material Summary"

- Auto-calculated from All Transactions using SUMIFS
- Shows quantity, avg rate, gross, discount, net per subcategory

Sheet: "Vendor Summary"

- Auto-calculated billed vs paid per vendor

Other Sheets

- Master Data, Monthly Summary, Dashboard (Excel), Bill Entry, Labour Tracker, How to Use

3. DASHBOARD ARCHITECTURE

Technology

- **React JSX** artifact (`.jsx` file)
- Uses `window.storage` API for persistent data across sessions
- Single file — all CSS inline, no external dependencies
- Max width 390px (iPhone-width design)
- Default: **Dark mode**

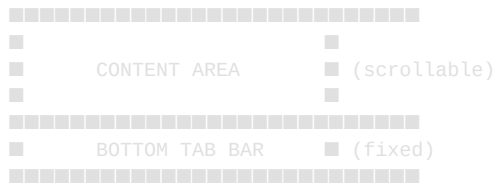

Storage Pattern

```
const VER = 'dashboard-vNN'; // Bump version number on every data update
// On load: try storage.get(VER), fallback to INITIAL_DATA
// On change: storage.set(VER, JSON.stringify(data))
```

CRITICAL: Every time data changes in INITIAL_DATA, bump the version number to force fresh load. Old cached data won't update otherwise.

State Variables

4. COLOR SYSTEM

Header

- Background: `linear-gradient(180deg, #0a0a0a, #1a1a2e 60%, #16213e)` — dark navy, NOT purple
- "BIHAR HOME BUILD" — small caps, rgba(255,255,255,0.7)
- Phase badge: "■ Plinth Phase" — orange text on translucent orange bg
- Theme toggle: ■/■ button, 26px circle
- "■ Project Dashboard" — 22px, bold, white
- "Started 7 May 2026 · Live Tracker" — 11px, rgba(255,255,255,0.7)
- "Updated: DD MMM YYYY" — 10px, rgba(255,255,255,0.5)

Bottom Tab Bar

5 tabs with emoji icons and labels:

■ Overview | ■ Vendors | ■ Materials | ■ Payments | ■ Breakdown

- Active tab label: #007aff
- Inactive: txt3 color
- Background: semi-transparent surface with top separator
- No dynamic island, no status bar, no top pill tabs

6. TAB SPECIFICATIONS

Tab 0: Overview

Alert Cards (top)

- Orange gradient (`linear-gradient(135deg, #ff8c00, #ff6b00)`) for urgent/action items
- Blue gradient (`linear-gradient(135deg, #4a90d9, #357abd)`) for informational
- Title: 13px, bold, white
- Description: 11px, `#ffffff` (pure white — NOT transparent), lineHeight 1.4

KPI Stat Cards (2x2 grid)

4 cards only (NO txns/payments cards):

1. ■ Total Spent — main amount
2. ■ On Site — material billed value
3. ■ Advance — brick advance remaining (orange)
4. ■ Pending — unpaid vendor balance (red)

Each card: Surface1 bg, 12px border-radius, icon 16px, label 9px uppercase, value 20px bold, sub-text 9px

Notes Section

- Header: "■ Notes" with —■ edit and ✕ clear buttons
- Green box: dark mode `#1b3a1f` bg, `#4ade80` border
- **Numbered lines:** Each line prefixed with "1.", "2.", "3." in green
- **Auto-height textarea:** `overflow: hidden`, grows with content, NO scrollbar
- Edit mode: textarea overlaid on numbered lines
- Empty state: "No notes — tap —■"
- Notes persist in storage

Tab 1: Vendors

Section 1: "■ Action Needed" (red header)

- Vendor cards showing name, category, paid amount, badge ("■37.1K DUE" in orange)

Section 2: "■ Brick Delivery Tracker"

- Header: "■ Brick Company" + "XX% Delivered" in orange
- Stats rows: Total Advance, Bricks Received, Est. Total Order, Rate
- Progress bar: gradient `#ff6b35` to `#ff9500`
- Footer: "XX,XXX delivered of ~43,000"

Section 3: "■ Mitti Delivery Tracker"

- Header: "■ Mukesh Yadav — Mitti" + "XX Trailers" in orange
- Stats: Batch 1 (date + count), Batch 2 (date + count), Total, Rate, Total Cost, Paid, Balance Due
- Split progress bar showing batches proportionally

Section 4: "✓ Settled — tap to expand"

- Each vendor row is tappable (chevron `>` rotates on expand)
 - Shows: name, category description, total amount, "PAID" badge
 - **Expanded view:** Table with columns DATE | ITEM | QTY | RATE | TOTAL
- Notes shown as italic sub-text with "■" prefix
- Footer: "Total (N items) ■X,XX,XXX"
- All vendors have full item-level detail

Tab 2: Materials

Color Legend at top:

`● Building ● Steel ● Cement ● Chemical ● Other`

Material List — each row tappable:

- Name + amount + chevron `>`
- Detail text (qty, rate summary)
- Color-coded progress bar (barColor per material category, 4px height)
- Bar width = material amount / max material amount × 100%

Expanded Purchase Table:

- Columns: DATE | VENDOR | QTY | RATE | TOTAL
- QTY shows with unit (e.g., "100 Pcs", "27.5 Ton")
- Total in blue (#007aff)
- Notes as italic sub-text with "■"

Footer: "Net Material ■X,XX,XXX" in bold blue

Tab 3: Payments

Payer Summary Cards (3 equal-width)

- Name, amount (in payer color), count

Proportion Bar

- Stacked horizontal bar (6px height) showing payer splits
- Percentage labels below in payer colors

Month Summary Pills (scrollable horizontal)

- Each pill: month name, total amount (orange), payment count

Month-Grouped Payments

- Sticky month header: "Jun 2026" / "May 2026" with total + count
 - Each payment card has:
- Left color bar (4px wide) in payer's color
- Vendor name (13px bold), description (10px gray), payer + mode (9px gray)
- Amount in orange (#ff6b35), date below
- Sorted newest first within each month

Tab 4: Breakdown

SVG Donut Chart

- viewBox="0 0 110 110", radius=44, strokeWidth=14
- Each category as a colored segment
- Center text: total amount (bold) + "Total" label
- Color legend beside donut

Category Detail — tap to expand

- Each row: icon + name + sub-description + amount + percentage + chevron
 - **Expanded view:** Subcategory items
- Name, detail description
 - Amount in category color
 - "X% of category" sub-text
 - Dark background (#111 in dark mode)
-

7. DATA MODEL (INITIAL_DATA)

The INITIAL_DATA object should be built by reading the Excel file. Structure:

```
const INITIAL_DATA = {
  updated: "DD MMM YYYY",
  phase: "Plinth",
  phasesDone: ["Land Development", "Foundation"],
  estBudget: 2500000,

  kpis: {
    totalPaid: Number,      // Sum of Payment Tracker amounts
    materialBilled: Number,  // Sum of All Transactions Net amounts
    vendorAdvance: Number,   // Brick Company: paid - delivered value
    pending: Number,         // Mukesh Yadav: billed - paid
    txns: Number,            // Count of All Transactions rows
    payments: Number,        // Count of Payment Tracker rows
    vendors: Number          // Count of unique vendors
  },

  alerts: [
    { type: "orange", title: "■XX Due – Vendor", desc: "Details..." },
    { type: "blue", title: "Brick Co. – XX% Delivered", desc: "Details..." }
  ],

  payers: [
    {
      name: "Avinash", color: "#007aff", amount: Number, count: Number,
      payments: [
        { date: "DD-MMM", to: "Vendor", desc: "Description", amt: Number, mode: "GPay/Bank" },
      ]
    },
    // Papa (color: #ff9500), Chota Bhai (color: #34c759)
  ],

  vendors: {
    action: [
      { name: "Vendor", cat: "Details", paid: Number, badge: "■XXK DUE", badgeType: "y" }
    ],
    brick: {
      advance: Number, received: Number, total: Number,
      rate: Number, lastDelivery: "description", pct: Number
    },
    mitti: {
      totalTrailers: Number, batch1: Number, batch2: Number,
      rate: Number, totalCost: Number, paid: Number, vendor: "Name"
    },
    settled: [
      {
        name: "Vendor", cat: "Description", amt: Number,
        items: [
```

```

        { date: "DD-MMM", item: "Name", qty: Number, unit: "Unit",
          rate: Number, total: Number, note: "optional" }
      ]
    }
  ],
},
materials: [
  {
    name: "Material Name", amt: Number, barColor: "#hex",
    detail: "Summary text",
    purchases: [
      { date: "DD-MMM", qty: Number, unit: "Unit", rate: Number,
        total: Number, vendor: "Name", note: "optional" }
    ]
  }
],
categories: [
  {
    name: "Category", icon: "emoji", amt: Number, pct: Number,
    color: "#hex", sub: "Subcategory list text",
    items: [
      { name: "Subcategory", amt: Number, detail: "Description" }
    ]
  }
],
notes: "" // User-editable persistent notes
};

```

8. READING EXCEL TO BUILD DATA

To compute KPIs:

1. **totalPaid** = Sum of column G in "Payment Tracker"
2. **materialBilled** = Sum of column O in "All Transactions" (only rows with data)
3. **vendorAdvance** = Payment to "Brick Company" minus sum of brick delivery Net amounts
4. **pending** = Sum of Net for vendor "Mukesh Yadav" in All Transactions minus sum paid to "Mukesh Yadav" in Payment Tracker

To build payer data:

- Group Payment Tracker by column C (Paid By)
- "Self-GPay" and "Self-Bank Transfer" both map to "Avinash"
- Sum amounts and count per payer

To build material list:

- Group All Transactions by subcategory (column F)
- Aggregate qty, net amount
- Sort by net amount descending
- Assign barColor based on category (column E)

To build vendor detail:

- Group All Transactions by vendor (column H)
- For each vendor, list all items with date, item description, qty, unit, rate, net amount

To build categories:

- Group All Transactions by category (column E)
 - Within each category, sub-group by subcategory
 - Calculate percentages against total billed
-

9. INTERACTION PATTERNS

Expand/Collapse

- Tap row to expand, tap again to collapse
- Only one item expanded at a time per section
- Chevron `>` rotates 90° on expand (`transform: rotate(90deg)`)
- Expanded content has darker background (#111 in dark mode)
- Transition: `transition: 'transform .2s'`

Notes

- Tap  to enter edit mode
- Tap X to clear all notes
- Each line auto-numbered (1., 2., 3...)
- Press Enter to create new numbered line
- Textarea auto-resizes: `el.style.height = 'auto'; el.style.height = el.scrollHeight + 'px'`
- No scrollbar (overflow: hidden)
- Notes persist in window.storage

Theme Toggle

-  in dark mode,  in light mode
- Positioned in header top-right
- Toggles all colors via CSS variables in the component

Tab Switching

- Bottom tab bar, 5 tabs
- Active tab label in #007aff
- Content area scrolls independently per tab

10. FORMATTING HELPERS

```
// Format as X.XXL or XK
const fmt = n => n >= 100000
  ? `${(n/100000).toFixed(2)}L`
  : n >= 1000 ? `${(n/1000).toFixed(1)}K` : `${n}`;

// Format with Indian comma separators
const fmtF = n => `${n.toLocaleString('en-IN')}`;

// Parse dates for sorting (DD-MMM format)
const monthMap = {Jan:1,Feb:2,Mar:3,Apr:4,May:5,Jun:6,Jul:7,Aug:8,Sep:9,Oct:10,Nov:11,Dec:12};
const parseDate = d => { const [dd, m] = d.split('-'); return (monthMap[m]||0)*100 + parseInt(dd); };
```

11. CRITICAL DESIGN RULES

1. **Dark mode is default.** The gradient header must be dark navy (#0a0a0a → #1a1a2e), NOT purple.
2. **Alert description text must be pure white (#ffffff).** Never use opacity or rgba for alert body text.
3. **No "Txns" or "Payments" stat cards** on the Overview tab. Only 4 cards.
4. **Material bars are color-coded** by category, not all the same color.
5. **Payments are grouped by month** with sticky headers and a proportion bar.
6. **Vendor names must match exactly** between All Transactions and Payment Tracker.
7. **Brick deliveries** do NOT generate new payments — they reduce the advance balance.
8. **Earth filling labour** is vendor "Daily Labour", NOT Mukesh Yadav.
9. **Discount % is stored as decimal** (0.04 not 4). Only applies to Tiscon 12mm, 10mm, 8mm. NOT 6mm.
10. **Month column** in Excel is text ("May-2026") not a date.
11. **Storage version must be bumped** on every data update to force cache refresh.

12. **No localStorage/sessionStorage** — use only `window.storage` API (Claude artifacts).
 13. **Font:** Inter / -apple-system / sans-serif
 14. **Max width:** 390px, centered on page
 15. **Card border-radius:** 14px with 0.5px separator border
 16. **Numbers use:** `fontVariantNumeric: 'tabular-nums'`
-

12. STEP-BY-STEP RECREATION INSTRUCTIONS

1. **Read the Excel file** — extract all data from "All Transactions" and "Payment Tracker" sheets
 2. **Compute aggregates** — totals by vendor, payer, category, subcategory, material
 3. **Build INITIAL_DATA** — following the structure in Section 7
 4. **Create React JSX artifact** — single file, max 390px width
 5. **Implement 5 tabs** — following Section 6 specifications exactly
 6. **Add window.storage** — with versioned key pattern
 7. **Test all interactions** — expand/collapse on Vendors, Materials, Breakdown; notes edit; theme toggle; payment month grouping
 8. **Verify numbers match** — cross-check dashboard totals with Excel
-

13. COMMON PITFALLS TO AVOID

- Don't use `localStorage` or `sessionStorage` — they don't work in Claude artifacts
- Don't use purple gradient in header — it makes text unreadable
- Don't put Txns/Payments stat cards on Overview — they were removed by user request
- Don't make alert description text transparent/low-opacity — must be pure white
- Don't attribute earth filling labour to Mukesh Yadav
- Don't apply 4% discount to Tiscon 6mm — only 12mm, 10mm, 8mm get discount
- Don't use IIFE pattern for simple tab rendering — can cause React rendering issues
- Don't forget to sort payments by date descending within month groups
- Don't hardcode the date "Updated" — read it from the latest transaction date in Excel
